

What LearnPulse Actually Is

LearnPulse is a self-paced AI skills training platform. Students learn prompt engineering, AI tools, and AI-assisted workflows through hands-on challenges — not video lectures. Every submission is graded in real time by Claude AI, with specific written feedback, on a 0–100 scale. Passing unlocks the next challenge. Organisations license bulk seats for their workforce; individuals buy the same bundle for themselves.

HOW THE CORE LOOP WORKS

- 1. **Student reads the challenge** — a realistic task: write a prompt, use an AI tool, build a small automation.
- 2. **Student submits a response** — Claude AI scores it 0–100 and writes specific feedback: what worked, what to change.
- 3. **Pass the threshold (70+) to unlock the next challenge.** There's no "click next" — the gate is real.
- 4. **Complete every challenge in a module** → **verified certificate issued automatically**, publicly checkable at a permanent URL.

This is the single most important thing to communicate: it's *practice with real feedback*, not video-watching. That's the whole pitch in one sentence.

THE CURRICULUM (5 MODULES, 110 TOTAL CHALLENGES)

MODULE	CHALLENGES	WHAT IT COVERS
1. AI Prompt Engineering Foundation	34	Core prompting technique, from basics to advanced methods
2. AI Tools & Platform Features	24	The AI tool ecosystem — ChatGPT, Claude, Gemini, and platform-specific power features
3. AI Agents & Automation	22	Building AI agents and assistants; automation platforms; persistent workflows
4. Capstone: Coding with AI	15	Build real Python programs with AI as a coding tutor — no prior coding experience required
5. Capstone: Cybersecurity with AI	15	Defensive security fundamentals, using AI as an analysis tool

Plus a **free intro module** available to every registered user — a self-paced walkthrough (not AI-graded like the modules above) that lets a prospect try the platform's feel before buying. Good for org trials: "have your team try the free intro before we talk numbers."

CERTIFICATION

Every completed module issues a certificate (format LP-YYYY-XXXXXXX), publicly verifiable at `learnpulse.online/certificate/<number>`. This is real and live — if a prospect asks "how do we know this is legitimate," this is the answer: anyone can check a certificate number and see it's real, no login required.

GAMIFICATION

Points, a leaderboard, streaks, and achievement badges keep engagement up across a cohort — useful to mention for org buyers worried about completion rates on self-paced training (a common objection to async learning in general).

PRICING RECAP

PLAN	PRICE
Individual — full bundle, lifetime access	\$100 USD (or KES equivalent)
Org — 20–49 seats	\$65/seat
Org — 50–149 seats	\$50/seat
Org — 150+ seats	\$35/seat (custom quote above 300)

Full pricing sheet with worked examples: see [LearnPulse_Pricing_Packages.pdf](#).

HOW TO PITCH IT — POSITIONING

The cost angle

Coursera for Business and Udemy Business run \$300–400 per seat, *per year*. LearnPulse is one-time, not a renewal. On any multi-year horizon the gap is enormous — lead with this against those two specifically, since they're what most buyers already compare against.

The engagement angle

Video-course completion rates are notoriously low. LearnPulse's gate is a real pass/fail on a graded task, not a "mark as complete" button — if a buyer cares about whether training actually sticks, this is the differentiator, not price.

The proof angle

Point to the certificate verification page. It's the one concrete, checkable thing you can hand a skeptical buyer mid-conversation.

Opening lines that work

"Most AI training I see companies buy is basically video-watching, priced annually. LearnPulse is hands-on — your team practices real prompt-engineering and AI-tool tasks, gets scored instantly, and earns a verifiable certificate — and it's one-time, not a renewal."

Objection handling

OBJECTION	RESPONSE
"We already use Coursera/Udemy."	Ask what their actual completion rate looks like — it's usually low. Position LearnPulse as the hands-on complement or replacement, and lead with the one-time-vs-annual cost gap.
"Sounds expensive."	Reframe to per-seat, one-time: \$35–65/seat once vs. \$300+/seat/year elsewhere.
"Our staff aren't technical."	That's who Module 1 is built for — no prior AI or coding experience required.
"We need to see it work first."	Every user gets the free intro module automatically — offer 3–5 trial seats from their real team before any commitment.
"Is this legitimate / who's behind it?"	Point to the certificate verification page and offer a live demo — don't try to argue credibility in text, show it.

 Do not claim these — they are not live features

- **Do not cite any specific learner count, completion rate, "graduates hired," or star rating.** These numbers are not backed by real usage data and must never be quoted to a prospect.
- **Do not mention a jobs board or "apply to jobs on the platform."** This feature is fully disabled — the route 404s. If a prospect asks about job placement, do not imply this exists.
- **Do not promise "career support" for graduates.** This claim has been removed from the site and materials — there is no program behind it. If asked, say career outcomes aren't a formal program at this time.
- If asked for case studies, references, or usage numbers you don't have solid data for: say you'll follow up with real figures rather than estimating or repeating anything from memory.
