

AI Job Programme — Full Curriculum Update

To: Mark

From: Ambrose

Date: 7 February 2026

Subject: Module 1 Rework Complete + Full Programme Proposal (Modules 2–4)

Hi Mark,

Thank you for your feedback on the Module 1 content. You were absolutely right — the lessons had drifted too far into cybersecurity-specific territory, which isn't appropriate for beginners on the AI Job Programme.

I've completely reworked Module 1 to focus on **practical, real-world prompt engineering skills** that any beginner can relate to — job hunting, meal planning, professional emails, side hustles, personal branding, and more. Every lesson teaches a specific prompting technique through a hands-on scenario students will actually want to try.

I've also designed the full programme structure across 4 modules. Here's the thinking:

Module	Focus	What Students Walk Away With
Module 1	Prompt Engineering	Can communicate effectively with any AI tool
Module 2	AI Tools & Platform Features	Knows which tool to use when, and can use platform features like deep thinking, document download, and file upload
Module 3	AI Agents & Automation	Can build AI workflows, use agents, and automate tasks
Module 4	Capstone Project	Real portfolio piece — students choose Coding with AI or Cybersecurity with AI

The cybersecurity and coding content now sits in **Module 4 as an elective** — students choose the path that excites them and build a real project applying everything from Modules 1–3.

Below is the full breakdown.

Module 1: Prompt Engineering Mastery (15–20 hours) — COMPLETE

30 lessons teaching students how to communicate effectively with AI, progressing from absolute basics to advanced multi-step techniques. Every lesson is built around a real-world scenario the student completes themselves.

Part 1: Foundations — "Your AI Superpowers" (Lessons 1–8)

Starting from zero — no prior AI experience needed.

#	Lesson Title	What Students Learn	Scenario	Difficulty
1	Your First AI Conversation	How to write a basic prompt and have a productive AI interaction	Plan an ideal weekend trip by asking AI for help	Beginner
2	Be Specific, Get Better Results	Why vague prompts give vague answers — the power of specific details	Get AI to write a personalised cover letter for a dream job	Beginner
3	The Magic of Context	How giving background information transforms AI responses	Explain blockchain to three different audiences (child, colleague, CEO)	Beginner
4	Structuring Your Requests	Breaking complex tasks into clear, organised steps	Create a detailed weekly meal plan with dietary and budget constraints	Beginner
5	Show, Don't Just Tell	Using examples to guide AI's style and format (few-shot prompting)	Provide sample social media posts, then get AI to write more in the same voice	Beginner
6	Choosing the Right Format	Requesting specific output formats — tables, lists, bullet points	Build a comparison table for a real decision (laptops, courses, or cities)	Intermediate
7	Tone and Audience	Controlling how AI writes — formal, casual, fun, professional	Write the same company announcement as a formal email, casual Slack message, and Instagram post	Intermediate
8	The Art of Iteration	Refining AI responses step by step instead of expecting perfection first time	Draft, improve, and polish a LinkedIn "About" section across three rounds	Intermediate

Part 2: Levelling Up — "Conversations That Work Harder" (Lessons 9–16)

Building on the foundations with more advanced conversation techniques.

#	Lesson Title	What Students Learn	Scenario	Difficulty
---	--------------	---------------------	----------	------------

9	Building on the Conversation	Using multi-turn conversations to develop ideas progressively	Plan a side business idea over a 3-message conversation, building on each response	Intermediate
10	The Perfect Briefing	Front-loading context so AI understands your full situation before responding	Prepare for a job interview by giving AI your complete background, then getting tailored advice	Intermediate
11	Role Play for Expert Advice	Assigning AI a specific expert role to get specialist-quality answers	Get financial planning advice from AI acting as a certified financial advisor	Intermediate
12	Think Step-by-Step	Chain-of-thought prompting — asking AI to show its reasoning	Have AI analyse a career decision by walking through each factor systematically	Intermediate
13	Constraints Unlock Creativity	Using specific constraints to get more focused, creative outputs	Write a professional "About Me" page with 5+ constraints (word count, tone, keywords, audience)	Intermediate
14	Your AI Learning Coach	Setting up AI as a personalised tutor that adapts to your learning style	Establish your learning preferences, then get a custom study plan for photography	Intermediate
15	When to Start Fresh vs Continue	Knowing when to keep a conversation going vs starting a new one	Demonstrate two scenarios: one where continuing is better, one where starting fresh wins	Advanced
16	Prompt Templates That Save Time	Creating reusable prompt structures you can use again and again	Build a template that converts messy meeting bullet points into professional agendas	Advanced

Part 3: Real-World Power — "AI at Work and Life" (Lessons 17–24)

Applying prompt engineering to real professional and personal situations.

#	Lesson Title	What Students Learn	Scenario	Difficulty
17	The Email Wizard	Drafting, tone-matching, and refining professional emails	Write a follow-up email after being ghosted by a recruiter — professional but effective	Intermediate
18	Meeting Notes to Action Plans	Extracting structure and actionable items from messy, unstructured text	Transform raw meeting notes into organised action items with owners and deadlines	Intermediate
19	Research Like a Pro	Using AI as a research assistant to explore complex topics systematically	Research a career change (e.g. teaching to UX design) with pros/cons, learning paths, and a 90-day plan	Advanced
20	Content Creator's Toolkit	Generating consistent, platform-appropriate social media content	Create a full week's social media content calendar with posts, hashtags, and scheduling	Intermediate
21	Data Storytelling	Turning raw numbers into compelling narratives for decision-makers	Transform shop performance data into a clear executive summary with insights and recommendations	Advanced
22	Problem-Solving Partner	Using structured problem-solving frameworks with AI	Diagnose why an online store's sales dropped 40% using a systematic analytical approach	Advanced
23	Learning Accelerator	Building comprehensive, personalised learning plans with AI	Create a complete 4-week plan to learn public speaking, with resources, practice exercises, and milestones	Intermediate
24	The Negotiation Coach	Preparing for difficult conversations with scripts, counterarguments, and practice	Prepare for a salary negotiation with talking points, responses to pushback, and confidence-building practice	Advanced

Part 4: Mastery — "Putting It All Together" (Lessons 25–30)

Capstone-level challenges combining multiple techniques from the entire module.

#	Lesson Title	What Students Learn	Scenario	Difficulty
25	Build a Business Plan	Combining research, structure, and iteration to create complex documents	Produce a mini business plan for a tutoring side hustle — market analysis, costs, pricing, and marketing	Advanced
26	Your Personal Brand	Creating consistent messaging across multiple formats and platforms	Build a personal brand package: LinkedIn bio, elevator pitch, portfolio intro, and email signature — all in one voice	Advanced
27	Event Planning Pro	Multi-step project planning with timelines, budgets, and contingencies	Plan a complete team-building workshop including schedule, budget, task assignments, and backup plans	Intermediate
28	Explain Anything to Anyone	Adapting complex information for completely different audiences	Take one topic (e.g. artificial intelligence) and create 3 versions: for a 10-year-old, a colleague, and a board of directors	Intermediate
29	The Multi-Agent Thinker	Simulating multiple expert perspectives to get well-rounded advice	Get three different experts (marketer, developer, designer) to each review a subscription box product idea	Advanced
30	Prompt Engineering Mastery Challenge	Combining every technique learned across the module in one challenge	Students choose their own real-world scenario and apply role-setting, context, structure, constraints, and iteration in a 3–4 prompt sequence	Advanced

Module 2 (Proposed): AI Tools & Platform Features (15–20 hours)

Module 1 taught students *how to talk to AI*. Module 2 teaches them *which tools to use and what they can do*. Students get hands-on with the platform's advanced features — deep thinking, document download, file upload — and explore the wider AI tool ecosystem so they can pick the right tool for any job.

Part 1: "Unlock Your Platform" (Lessons 1–8)

Students discover what the platform can really do — each lesson unlocks a feature through a real task.

#	Lesson Title	What Students Learn	Hands-On Activity
1	Welcome to Your AI Workspace	A guided tour of the platform's full capabilities — what's available and how it all fits together	Complete a quick multi-feature challenge: ask a question, format the output, and save the result
2	Deep Thinking Mode	When and how to activate deep thinking for problems that need careful analysis — and when regular mode is fine	Solve a complex business dilemma (expanding a business vs hiring staff) using deep thinking, then compare with a regular response
3	Create Professional Documents	How to generate polished, downloadable documents — reports, letters, proposals — ready to share	Create a professional project proposal document and download it as a finished file
4	Upload & Analyse Files	How to upload documents and get AI to read, summarise, extract data, and provide insights	Upload a CV or report and get AI to provide a detailed analysis with improvement suggestions
5	Context Windows Explained	What AI actually "remembers" during a conversation, why it sometimes forgets, and how to work within those limits	Run a hands-on experiment: have a long conversation and test when AI starts losing track, then learn strategies to fix it
6	Managing Long Projects	Techniques for keeping AI focused and consistent across complex, multi-message projects	Use a 5+ message conversation to develop a detailed event plan, applying context management techniques to keep quality high
7	Compare AI Models	How different AI models (e.g. fast vs powerful) produce different results — and when to choose which	Run the same task on two different model settings and write up which performed better and why
8	Set Up Your AI Preferences	Configuring custom instructions and preferences so AI knows your role, industry, tone, and working style	Create a personal profile setup so that every future conversation starts with AI already understanding who you are

Part 2: "The AI Tool Ecosystem" (Lessons 9–16)

Students explore the major AI tools available today and learn to match the right tool to the right job.

#	Lesson Title	What Students Learn	Hands-On Activity
9	ChatGPT in Practice	ChatGPT's features — models, GPTs, plugins, custom instructions, and real-world strengths	Complete 3 different tasks and evaluate how ChatGPT handles each one
10	Claude for Deep Work	Claude's strengths — long documents, careful analysis, reasoning, artifacts, and projects	Use Claude to analyse a detailed case study and produce a structured recommendation
11	Google Gemini & the Google Ecosystem	How Gemini works with Google Docs, Sheets, Search, and everyday Google tools	Plan a research project using Gemini integrated with Google Workspace tools
12	Microsoft Copilot at Work	Using Copilot across Word, Excel, PowerPoint, Outlook, and Teams	Transform rough notes into a polished Word document and a 5-slide PowerPoint summary
13	AI Image Generation	How DALL-E, Midjourney, and Adobe Firefly create images from text — and how to write great visual prompts	Design a brand identity: generate a logo concept, social media banner, and product mockup using image prompts
14	AI for Presentations & Video	Tools like Gamma, Beautiful.ai, Synthesia, and Descript that create slides and videos from text	Create a 10-slide pitch deck using an AI presentation tool
15	AI Writing & Editing Tools	When to use Grammarly, Hemingway, or Jasper vs a general AI chat tool	Take a rough draft and improve it using both a writing assistant and a chat AI, then compare the results
16	Choosing the Right Tool for the Job	A practical decision framework — matching the tool to the task based on strengths, speed, and cost	Given 6 real work scenarios, pick the best AI tool for each and justify the choice

Part 3: "Power Features & Professional Workflows" (Lessons 17–24)

Combining tools and features to build real professional workflows.

#	Lesson Title	What Students Learn	Hands-On Activity
17	AI for Spreadsheets & Data	Using AI in Google Sheets and Excel to write formulas, clean data, and spot trends	Upload a messy dataset, use AI to clean it, generate formulas, and create a summary chart
18	AI Voice & Transcription	How Otter.ai, Whisper, and Fireflies turn meetings into searchable, actionable text	Transcribe a recording and use AI to extract key decisions, action items, and a summary email
19	Notion AI & Smart Workspaces	Using AI built into productivity tools to organise projects, notes, and knowledge	Set up an AI-powered project workspace with automated summaries and task tracking
20	Automating Repetitive Tasks	Connecting AI tools together with Zapier, Make, or built-in automations to save hours	Design a simple automation workflow: "When X happens, AI does Y, then sends Z"
21	Building Your Prompt Library	Creating a personal collection of go-to prompt templates organised by category	Build a library of 10+ reusable prompt templates for your most common work tasks
22	AI Ethics, Hallucinations & Limitations	What AI gets wrong, how to spot hallucinations, and when not to trust AI output	Deliberately find AI hallucinations in 3 different topics, then develop a personal fact-checking workflow

23	Data Privacy & AI at Work	What you should and shouldn't share with AI tools — GDPR, company policies, and best practices	Write a short AI usage policy for a fictional company, covering data handling and acceptable use
24	Module 2 Capstone: The AI-Powered Workday	Combining every tool and feature learned — a full simulated workday using AI	Complete a realistic workday simulation: handle emails, analyse a file, create a document for download, prepare a presentation, and build a content plan — all AI-assisted

Module 3 (Proposed): AI Agents & Automation (15–20 hours)

This is where things get exciting. Students move from *using* AI to *deploying* AI — learning how AI agents work, how to build custom assistants, and how to automate multi-step workflows. This module bridges the gap between "I can use AI tools" and "I can make AI work for me."

Part 1: "Meet Your AI Agents" (Lessons 1–8)

Understanding what agents are and how to create them.

#	Lesson Title	What Students Learn	Hands-On Activity
1	From Chat to Agents — What's the Difference?	How AI agents go beyond chat — they plan, use tools, and take actions autonomously	Compare a standard AI chat response with an agent-style response that breaks a task into steps and executes each one
2	How AI Agents Think	Task decomposition, planning, and step-by-step execution — how agents tackle complex problems	Give AI a complex goal and prompt it to work through it agent-style: plan steps, execute each one, and review the result
3	Build a Custom GPT	Creating a personalised AI assistant in ChatGPT with specific instructions, knowledge, and personality	Build a custom GPT for a specific role (e.g. "My Interview Coach" or "Social Media Manager") and test it
4	Claude Projects & Artifacts	Setting up persistent workspaces in Claude with documents, context, and reusable outputs	Create a Claude Project for a real scenario — upload reference materials, set instructions, and produce an artifact
5	Google NotebookLM	AI-powered research — uploading sources and getting AI to synthesise, summarise, and answer questions from your own documents	Upload 3+ sources on a topic and use NotebookLM to generate a briefing document and Q&A
6	Crafting Agent Personas	Writing detailed system prompts that turn AI into a specialist — tone, expertise, rules, and behaviour	Create 3 different agent personas (e.g. strict editor, enthusiastic coach, cautious analyst) and test how each handles the same question
7	Giving Agents Knowledge	How to feed agents context, documents, and data so they become experts in your specific domain	Build a "company expert" agent by providing it with a fictional company's handbook, values, and FAQs
8	Multi-Agent Thinking	Simulating a panel of experts — getting multiple AI "agents" to debate, review, or advise on the same problem	Set up a 3-agent advisory panel (marketing, finance, operations) to evaluate a business decision from different angles

Part 2: "Automation & Workflows" (Lessons 9–16)

Connecting AI to real workflows and automating repetitive tasks.

#	Lesson Title	What Students Learn	Hands-On Activity
9	Why Automation Matters	How AI automation saves hours of repetitive work — and which tasks are worth automating	Audit your own weekly routine and identify 5 tasks that AI could automate or speed up
10	Zapier + AI	Connecting apps together with AI steps — triggering actions, processing data, and sending outputs automatically	Design a Zapier workflow: e.g. "New email → AI summarises it → Posts summary to Slack"
11	Make (Integromat)	Visual workflow building — dragging and connecting AI modules into multi-step processes	Build a visual workflow that takes form submissions, processes them with AI, and creates a summary report
12	Email & Calendar Automation	Using AI to draft replies, sort emails, schedule meetings, and manage your inbox	Set up an AI-powered email workflow: categorise incoming mail, draft responses, and flag priorities
13	Content Pipelines	Automating content creation — from topic idea to drafted post to scheduled publication	Build a content pipeline: brainstorm → outline → draft → edit → format for 3 platforms — all in one flow
14	Data Collection & Reporting	Automated data gathering, analysis, and AI-generated reports on a schedule	Create an automated reporting flow: collect data → AI analyses trends → generates a weekly summary document
15	No-Code AI App Building	Creating simple AI-powered applications without writing any code — using tools like Softr, Glide, or Bubble + AI	Build a simple no-code app: e.g. a customer FAQ bot, a feedback analyser, or a content generator
16	Building Your First Full Workflow	Combining multiple automation steps into a complete end-to-end workflow	Design, document, and present a multi-step workflow that solves a real business problem using AI agents and automation

Part 3: "Advanced Applications & Future Skills" (Lessons 17–22)

Looking ahead — where AI agents are going and how to stay ahead of the curve.

#	Lesson Title	What Students Learn	Hands-On Activity
17	AI Coding Assistants — An Overview	What GitHub Copilot, Cursor, and Claude Code do — understanding the tools even if you don't code (yet)	Watch AI write code in real time, then evaluate: could you direct an AI coding assistant to build something useful?

18	AI for Team Collaboration	Using AI agents in team settings — shared workspaces, collaborative editing, and AI-assisted meetings	Design an AI-assisted team workflow for a fictional project: who uses what, when, and how
19	AI in Different Industries	How AI agents and automation are transforming healthcare, finance, education, marketing, legal, and more	Research how AI is being used in an industry that interests you and present a 5-minute briefing
20	The Future of AI Agents	What's coming next — autonomous agents, computer use, AI employees, and the evolving job market	Write a "future of my career" brief: how AI agents will change your target role in the next 2–3 years
21	AI Safety & Responsible Automation	Guardrails, human oversight, bias, and the ethics of letting AI act autonomously	Design a safety checklist for an AI automation: what checks, approvals, and fallbacks should be in place?
22	Module 3 Capstone: Your AI Agent System	Combining everything — design a complete AI agent + automation system for a real-world scenario	Design and present a full AI system: custom agents, automated workflows, and a clear use case — ready to deploy

Module 4 (Proposed): Capstone Project — Choose Your Path (15–20 hours)

This is where it all comes together. Students choose **one of two specialisation tracks** and build a real project that demonstrates everything they've learned across the programme. They apply prompt engineering (Module 1), AI tools (Module 2), and agent/automation skills (Module 3) to their chosen field.

Track A: Coding with AI

For students who want to learn programming — using AI as their personal coding tutor and pair programmer. No prior coding experience required.

#	Lesson Title	What Students Learn	Hands-On Activity
1	Why Learn to Code with AI?	How combining coding skills with AI is a career superpower — and why AI makes learning to code easier than ever	Explore what's possible: use AI to explain, write, and run simple code — see the magic before diving in
2	Your Coding Environment	Setting up a development environment with AI guidance — no confusion, no frustration	Set up Python with AI walking you through every step, then run your first "Hello, World!" programme
3	Variables & Data Types	The building blocks of programming — storing and working with information	Build a personal profile programme that stores and displays your name, age, and interests
4	Making Decisions in Code	How code makes choices — if/else logic, conditions, and branching	Build a quiz game that gives different responses based on the player's answers
5	Loops & Repetition	Automating repetitive tasks — for loops, while loops, and iteration	Create a programme that generates a personalised daily schedule for a full week
6	Functions	Writing reusable code blocks that you can call again and again	Build a toolkit of functions: a tip calculator, a word counter, and a password generator
7	Working with Data	Lists, dictionaries, and organising information in code	Build a contact book application that stores, searches, and displays entries
8	Reading & Writing Files	How programmes interact with files — reading data in and writing results out	Build a programme that reads a CSV file of expenses and produces a spending summary
9	Connecting to the Web — APIs	How programmes talk to online services to get real data	Build a script that fetches weather data or news headlines from a free API
10	Error Handling & Debugging with AI	How to use AI to find, understand, and fix bugs in your code	Take 5 broken code snippets, use AI to diagnose each bug, then fix and test them
11	Building a Simple Web Page	HTML, CSS basics — creating something visual with code	Build a personal portfolio web page with AI guiding the HTML and CSS
12	Working with Databases	Storing data permanently — basics of databases and SQL with AI help	Build a simple task manager that saves tasks to a database
13	Mini Project: Build a Budget Tracker	Combining files, functions, and data structures into a real tool	Build a budget tracker that lets you add expenses, categorise them, and view spending reports
14	Mini Project: Build a Data Dashboard	Combining APIs, data processing, and display into an interactive tool	Build a dashboard that pulls data, processes it, and displays key metrics with charts
15	Capstone: Build Your Own AI-Powered Application	Everything combined — students design, build, and present their own application	Plan, build, and demo an original application that solves a real problem using AI-assisted coding

Track B: Cybersecurity with AI

For students interested in protecting digital systems — learning security fundamentals and using AI as a powerful analysis tool.

#	Lesson Title	What Students Learn	Hands-On Activity
1	Welcome to Cybersecurity	Why cybersecurity matters, the threat landscape, and career paths in security	Map out the cybersecurity field: types of roles, what each does, and where AI fits in
2	Types of Cyber Attacks	Phishing, malware, ransomware, social engineering, DDoS — understanding the threats	Analyse 5 real-world attack examples (anonymised) and classify each by type, target, and impact

3	Network Security Fundamentals	How networks are structured and protected — firewalls, VPNs, encryption basics	Draw and annotate a network security diagram for a small business, identifying potential weak points
4	AI as Your Security Analyst	Using prompt engineering specifically for security tasks — analysis, documentation, and investigation	Use AI to analyse a simulated security alert and produce a professional assessment
5	Threat Intelligence with AI	How AI helps identify, classify, and prioritise threats from large volumes of data	Take a set of threat indicators and use AI to produce a threat intelligence briefing
6	Incident Response Fundamentals	The incident response lifecycle — preparation, detection, containment, recovery, lessons learned	Walk through a simulated security incident step by step, documenting each phase with AI assistance
7	Security Report Writing	How to write clear, professional security reports — executive summaries, technical details, recommendations	Produce a full security report for a simulated vulnerability discovery — from executive summary to technical appendix
8	Password Security & Authentication	Best practices for authentication — password policies, MFA, modern approaches	Audit a fictional company's password policy, identify weaknesses, and write an improved policy with AI
9	Social Engineering Defence	How attackers manipulate people — and how to build awareness and defences	Create a social engineering awareness training presentation for a team of 20 employees
10	Vulnerability Assessment	How to systematically identify, document, and prioritise security weaknesses	Conduct a simulated vulnerability assessment of a fictional web application and produce a prioritised findings report
11	Security Policies & Compliance	GDPR, ISO 27001, Cyber Essentials — frameworks and why they matter	Draft a data protection policy section for a small business, aligned with GDPR requirements
12	Secure Communication & Encryption	How encryption works in plain English — HTTPS, email encryption, secure messaging	Explain encryption to a non-technical manager, then create a "secure communication checklist" for a team
13	Mini Project: Security Audit Report	Combining vulnerability assessment, policy review, and professional writing	Conduct a full security audit of a fictional startup — assess risks, document findings, and present recommendations
14	Mini Project: Incident Response Simulation	Running through a realistic incident from detection to post-incident review	Handle a simulated ransomware attack: detect, contain, communicate, recover, and write the post-incident report
15	Capstone: Full Security Assessment	Everything combined — students produce a comprehensive security assessment for a realistic scenario	Produce a complete security assessment package: threat analysis, vulnerability report, policy recommendations, and executive briefing — all AI-assisted

Programme Summary

Module	Title	Hours	Lessons	Status
Module 1	Prompt Engineering Mastery	15–20	30	Complete — ready to go live
Module 2	AI Tools & Platform Features	15–20	24	Proposed — awaiting approval
Module 3	AI Agents & Automation	15–20	22	Proposed — awaiting approval
Module 4	Capstone Project (choose Coding or Cybersecurity)	15–20	15 per track	Proposed — awaiting approval

Total programme: 60–80 hours across 4 modules (91 lessons + chosen capstone track)

The Student Journey

- Module 1** — *"I can talk to AI effectively."* Students master prompt engineering through 30 hands-on lessons with real-world scenarios.
- Module 2** — *"I know which tools to use and how to use them."* Students explore the platform's advanced features (deep thinking, document download, file upload) and the wider AI tool ecosystem (ChatGPT, Claude, Gemini, Copilot, image generators, and more).
- Module 3** — *"I can make AI work for me."* Students learn about AI agents, build custom assistants, create automated workflows, and understand where AI is heading — preparing them for the future of work.
- Module 4** — *"I can build something real."* Students choose their specialisation and produce a genuine portfolio piece. Coding students build an AI-powered application. Cybersecurity students deliver a full security assessment. Both tracks demonstrate everything learned across the programme.

Module 1 is ready to go live. I'd welcome your feedback on the Modules 2–4 proposals before I begin building them. Happy to jump on a call to walk through any of this in detail.

Best regards,

Ambrose
